

Canopy 7/9 Comfort cp.

CANOPY

As simple as it is versatile

Flexibility and versatility is something we always strive for in our products and perhaps that is precisely why our canopies are so popular. A Tentipi canopy can be set up quickly and easily as a protection over the door but can also be used as a freestanding roof or as a shelter. The larger model, which fits Nordic tipis in sizes 7 and 9, is eight square metres large, enough to provide shade and rain protection for four people sitting around a table.

Canopies

Canopy 5/7

A five square metre canopy. Comes with one telescopic pole and can be used mounted onto the Nordic tipi, as a freestanding roof or as a shelter large enough to sleep in. For use as a freestanding roof, an additional telescopic pole is needed (sold separately).

Material

Pro cp – beige, strong and water-repellent cotton/polyester fabric. The fabric is denser and more resistant to sunlight as regards strength and colour fastness than all corresponding fabrics tested. It has also better form stability and water repellency properties.

Pro eco – off-white, strong and water-repellent. Unique and sustainable fabric with a blend of hemp, organic cotton and recycled polyester.

Comfort cp – beige, strong and water-repellent cotton/polyester fabric.

Comfort light – rusty red, lightweight, ripstop reinforced polyamide fabric, UV-protected and double-sided silicone-coated.

Canopy 7/9

An eight square metre canopy. Comes with three telescopic poles. Canopy 7/9 can be used mounted onto the Nordic tipi over the door or as a freestanding roof or shelter, large enough to accommodate four people sitting around a table or two sleeping when used as a shelter. The canopy can also be used as a freestanding roof and then an extra telescopic pole can be used (sold separately) to utilize the full length.

Material

Pro cp – beige, strong and water-repellent cotton/polyester fabric. The fabric is denser and more resistant to sunlight as regards strength and colour fastness than all corresponding fabrics tested. It has also better form stability and water repellency properties.

The canopy is not intended to resist strong winds and snow. The exceptional storm resistance of a Tentipi® Adventure Nordic tipi is maintained by the canopy being designed so that it can easily be removed in bad weather.

Canopy 5/7 Comfort cp.

Accessory connector

As of 2012, all Safir and Zirkon Nordic tipis of sizes 5-9 have a patented accessory sleeve (an integrated holder for accessories, placed over the door). There is a separate accessory connector available for earlier models, for Onyx and for tent size 15. Find the right accessory connector for your Nordic tipi at tentipi.com

Suggested uses

Mounted onto the Nordic tipi

With a canopy on the Nordic tipi you get sun and rain protection over the entrance and a shady, sheltered social area outside the tent.

The canopy attaches quickly and securely to the accessory sleeve on the Nordic tipi. Canopy 7/9 is mounted with three telescopic poles (included). Canopy 5/7 is mounted with one telescopic pole (included).

Shelter

The canopy can be used without a tent, as a shelter if you need a simple but functional protection for the wind, with low weight.

When the canopy is mounted as a shelter, only one telescopic pole (included) is used.

Freestanding canopy

The canopy can also be mounted as a freestanding roof. To mount the Canopy 7/9 freestanding, three telescopic poles are needed, but a fourth extra pole (sold separately) can be used.

Canopy 5/7 is delivered with one telescopic pole, an additional pole (sold separately) is needed to mount it freestanding.
